

phpMyDomo

The ultimate Domotic remote for the rest of us

About

phpMyDomo is an open-source php Web Application aimed to provide a clean, robust, customizable, fast and intuitive interface to any Home Automation software, from any computer, tablet or smart-phone...

Features:

- Control any Home Automation Software, (currently Domoticz (<http://www.domoticz.com>), Domotiga (<http://www.domotiga.nl>), OpenHab (<http://www.openhab.org>), Domogik (<http://www.domogik.org>)...)
- Trigger Actions (or Notifications) with ease (XBMC, Email, Growl, Prowl, NMA, xPI, Nabaztag, Email, Shell,...)
- Browse your Cameras from a single page
- Display your photo library from a PhotoFrame like page
- Get a friendly and elegant GUI on any Browser, and make your family happy ;-)
- Easily customize it to your own need: Customize Pages, Skins, Languages, Links...
- And many more...
